

Workshop on Use of Blood Components in Pediatric practice

Theme: From Blood Donor to bed side.

Background:

Use of different blood products has increased in recent times in pediatric practice. Improving the supply of safe and adequate blood and blood components is a key intervention in reducing mortality and morbidity. The purpose of this workshop is to demonstrate how blood is separated into various components and discuss judicious and safe use of it in day to day practice. It will bring together transfusion service providers, clinical hematologists and most important the pediatricians, the end users.

Workshop outline

The Wet workshop will address the following key issues:

1. Screening of donor and Blood donation
2. Separation of blood into various components
3. Storage, handling and transportation of various components
4. Exact indications of various components- Guidelines and case based discussion.
5. Pre and post workshop questionnaire.
